

1394 Firewire for windows 8/8.1/10

About Windows 8/8.1/10 ++++++

If you are using Windows 10, here is something that you need to know about Firewire drivers.

Firewire was native to XP/Vista/7 and do not require any drivers, it is already all built into the OS. But, Microsoft has removed the built-in (native) driver from windows 8/8.1/10 and turns it into a standalone package.

You need to use the same standalone package to install the drivers manually and it will work with all our cards.

Here is the blog and link concerning the change to it.

<http://blogs.msdn.com/b/usbcoreblog/archive/2014/09/10/announcing-the-availability-of-a-standalone-legacy-1394-ohci-firewire-package.aspx>

Here is the drivers package that you need to download and follow the instruction to install. The Windows 8/8.1 also applies to Windows 10. KB 2970191:
